

## **The project of Origin of Slovenes and Europeans**

is inviting you on a presentation about the new scientific  
discoveries in the field of linguistics and history  
of the Slovenes and the other Europeans  
which will be held on

**June 7<sup>th</sup>, 2018**

**13:50 - 17:00**

in the hall of Slovenska matica, 1<sup>st</sup> floor, address  
**Kongresni trg 8, Ljubljana**

---

**Dear  
Slovene and European**

We all know that archeological, historical and linguistic interpretations of our past are many times in contradiction with already known or newly discovered revelations. Indubitable understanding of the obsolete and outmoded scientific dogmas, frequently do not lead to their revision. The reason for conservative behavior usually does not lay in the lack of expert knowledge, but, what history teaches us well, in the cessation of time that is practicing by the ones who occupy positions. Therefore, the main problem of science is not technology or knowledge, but human! During the last years, the genealogy and detailed linguistic studies, especially etymological revelations, based on comparison of the European languages, undermine the static dogmas more and more.

If you would like to hear more about new scientific discoveries and about **new Proceedings No. 15**, then you are invited to take a part of the 17<sup>th</sup> International Conference Origin of Slovenes and Europeans.

Best regards,  
Marko Hrovat  
President of the Conference  
Origin of Slovenes and Europeans
